

EXTERIOR FASTENERS

offer a full line of superior nails and screws specifically designed for optimal performance, appearance and value for all outdoor projects. The PrimeGuard Plus™ Premium Exterior Fasteners line includes the Silver Label stainless steel fasteners. These are the only fasteners recommended for use with cedar and redwood. The Gold Label coated fasteners feature a patented polymer coating that protects the fastener against corrosive elements. Also available are aluminum and copper fasteners.

HOUSE WRAP

is an ICC-ES certified weather barrier made of tough woven high-density polyethylene. House-wrap prevents air infiltration and water intrusion into the house's stud wall. This helps prevent rot and mildew while saving energy costs. House-wrap is the safe way to protect your home while allowing it to breathe.

CAP STAPLER

is designed for roofing felt and house wrap. This plastic cap stapler is one of the lightest (4.1 lbs) cap staplers on the market, shooting 5/8" 80 series flat wire staples. The tool has an easier and faster loading system than other cap staplers and is half the price of bulky cap nailers. Caps and staples are packaged together with a total of 2.2M caps and staples in each box.

COMPRESSOR

offers 10" pneumatic tires and a locking pull-out handle for easy jobsite mobility. It also boasts a CFM of 4.5 @ 90 PSI, which means it will supply the air capacity to keep the fastest contractor going all day. It also has recessed gauges and a roll cage design that is built to handle any type of jobsite abuse.

POLYURETHANE HOSE

has benefits that far exceed that of its traditional PVC and rubber counterparts. The air hose is 40 percent lighter than other hoses, resists kinking and remains flexible in cold weather. Furthermore, the hose is field repairable, has a reinforced hose protector for durability and is resistant to lubricating oil and grease. Grip-Rite conveniently carries a variety of male and female couplers in many sizes, as well as replacement swivel fittings to fit the Grip-Rite Polyurethane hose and all other major brands of hoses.

CARBIDE SAW BLADE

has a thin kerf for smoother cuts and enhanced cooling features, such as the expansion slots for proper heat dispersion, and offers all the performance and quality that professionals demand. The solid carbide tips provide longer life to the blade and the diamond knockout will accommodate most saws on the market.
