

# Grip-Rite Complete Fastening System

When it comes to reliable fastening systems, continuity and connectivity count. At least that's the thinking behind the complete Grip-Rite Fastening System from PrimeSource Building Products Inc.

PrimeSource is a national manufacturer and distributor of professional-grade building products. The company serves residential and industrial new-construction and remodeling markets as a value-added link in the distribution chain.

The Grip-Rite Fastening System includes a wide array of products that are designed to work together seamlessly. The system includes Grip-Rite tools and compressors, a complete line of Grip-Rite collated fasteners (nails, staples, finish nails, and brads for framing, roofing, and other construction applications), and various Grip-Rite accessories.

"The Grip-Rite pneumatic fastening system is contractor-focused and priced very competitively," says Tom Green, vice president for pneumatics. "We have gone to great lengths to engineer, develop, and produce first-rate products that are durable and reliable in the hands of professional contractors."

The core line of Grip-Rite's pneumatic tools includes a coil roofing nailer that is lightweight (4.86 lbs), balanced, and shoots 15° 7/8-in. through 1 3/4-in. coil roofing nails. The nailer has a 120-nail capacity with a dual feed pawl system that offers a consistent and reliable nail feed. It also has a multi-directional air exhaust, easy-to-use "tool-less" depth of drive adjustment, dual carbide inserts to prevent nose piece wear, and an adjustable shingle guide.

Other pneumatic tools available include a Round Head Framing Nailer, a Clipped Head Paper Tape Framing Nailer; 2 1/2-in. 15 Gauge Angle Finish Brad Nailer; a 2-in. 18 Gauge Brad Nailer; a 2 1/2-in. 16 Gauge Finish Nailer; a Gauge Headless Pinner; a 16 Gauge Medium Crown Stapler, and an 18 Gauge Narrow Crown Stapler.

The company offers a wide range of specialty nailers, staplers, and other tools.

Right: The company's non-kinking polyurethane air hose.

PrimeSource also offers specialty tools including a plastic cap stapler; flooring stapler; flooring cleat nailer; palm nailer; mini palm nailer, and joist hanger nailers.

Each tool has an aluminum body for job site durability and lightweight handling.

Grip-Rite has also expanded its compressor line, adding durable wheelbarrow compressors and a single tank compressor with wheels. The company offers a Dual Voltage Electric Wheelbarrow, a 5.5-HP Gas Wheelbarrow, a 9-HP Gas Wheelbarrow and a Single Tank Compressor with Wheels.

Grip-Rite also offers its own collated fasteners, available in a variety of materials and finishes, and designed to fit Grip-Rite pneumatic tools, as well as all other major brands. Grip-Rite's fasteners are guaranteed not to jam when used in the tool for which they are designed. This fastener line includes coil roofing nails; stick and coil framing nails; construction staples, and finish nails and brads. The fasteners' color-coded packaging and labeling make it easy to match a fastener to a tool and a fastener to the project. A color-coded band around the bottom of each box identifies the type of fastener (framing, roofing, finish, or staples).

Finally, as accessories to its fastening system, Grip-Rite offers a polyurethane air hose which is 40% lighter than other hoses, resists kinking, and remains flexible in cold weather. The hose is also field-repairable, has a reinforced hose protector for durability, and is resistant to lubricating oil and grease.

PrimeSource offers a responsive warranty program offering quality service to distributors and end users at more than 300 authorized service locations throughout the country. ■
